

Enhanced Cybersecurity Service

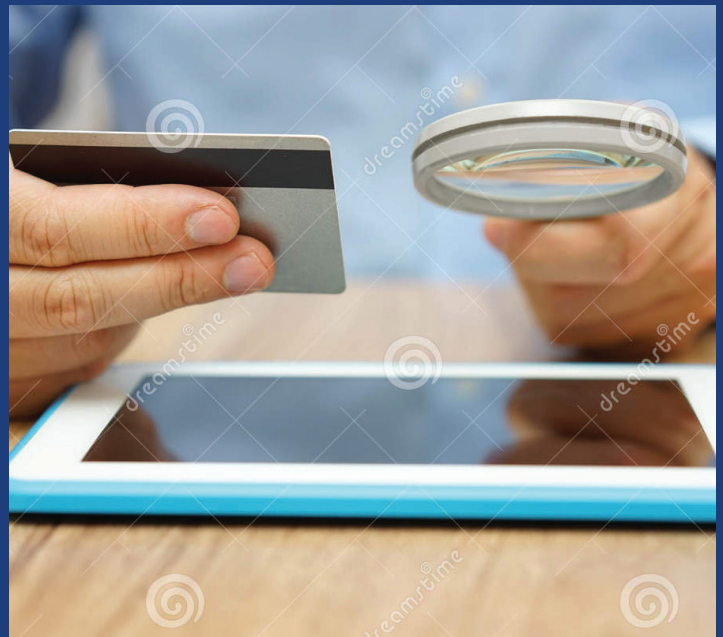

Information and cyber security is an area that has become critically important. Districts participating in our enhanced cybersecurity service will gain robust monitoring, detection and prevention services to help protect their critical resources and information. The service utilizes industry standard best practices to exceed mandated compliance (CIPA/FERPA) and NYS auditing guidelines.

Why Would A District Find This Valuable?

The WNYRIC would:

- Prepare the district for NYS Comptroller audits by utilizing technologies and designs that exceed their recommendations
- Quickly identify issues and assistance with corrective action(s) using a combination of custom, automated analytics and human investigation.
- Recognize vulnerabilities in network security policies, software packages, critical operating systems and application patches with guidance on how to remediate these issues.
- Aid in planning of upgrades to infrastructure and network services by using advanced data analysis to identify user and application requirements.
- Guarantee availability for essential educational resources.
- Improve responsiveness to issues by providing guidance to appropriate district and/or BOCES staff in assessing and correcting issues.
- Help protect student and staff systems from becoming compromised above and beyond local antivirus/antimalware software.

The district chooses the appropriate available option.
